

Aluline Adjustable Netball Posts

“Aluline” Aluminium Adjustable height Netball posts are the most advanced netball posts available today, and are designed using a custom aluminium extrusion made exclusively by us for use as sports posts. These systems are suitable for indoor and outdoor use, and will not rust. They are 72 mm in diameter with an effective wall thickness of 16 mm thanks to the advanced design, these posts are stronger and more rigid than steel or off the shelf geometric aluminium designs.

The Aluline systems are easy for all staff to handle, come with plastic stoppers in the base to protect your floor should the posts be dropped or dragged, and a high quality polyester powder coated finish.

However, to cater for Netta use as well, the system has been designed to be height adjustable, allowing for seamless use at both regulation heights and anywhere in between. The adjustment can be made from the ground, and is completed in seconds leaving the post in playing mode with no projection above the ring in either position.

The rings are fitted with safety net tubes rather than traditional hooks. This ensures longer and safer net attachment. They also borrow from Basketball designs for strength and have a wrap around brace rather than old style support struts for additional strength.

Designed primarily for sleeves, T base conversion kits are also available, as is a bolt down version for premium competition.

Product Code: **NBAL-H**
