

Heavy Metal Basketball Systems

When Strength Matters

Designed for the roughest environments, these systems are engineer certified to exceed cyclone conditions.

Featuring a 40 mm thick fibreglass backboard, the system delivers excellent, consistent ball rebound that can not be achieved on wooden backboards. The fibreglass system is fully ribbed for maximum strength, has a steel plate for ring support and will not break down over time or delaminate.

The ring is a heavy duty dual rim design with wrap around bracing and milled net hook ties as opposed to the old and dangerous welded wire spirals ensure maximum safety for users.

Like international indoor systems, this is a "direct mount" design where the goal bolts through the backboard onto the support structure.

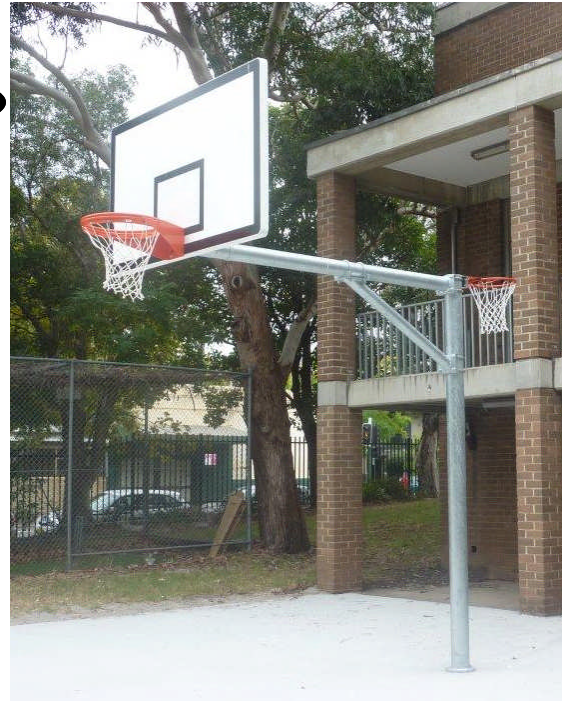

The tower is a bolt together design for ease of transport and installation. It is available in a 2400 projection and can be cut down on site. The system is reversible to allow for Netball. A Teflon disc is included in these systems for ease of rotation.

The system has a oversize 141 mm upright for maximum strength and stability under all conditions, and is hot dip galvanised

Current as of 1 April 2011
